EDUCATION

National Institute of Technology, Raipur **08/2024 – 08/2027**
Master of Computer Applications - ***CGPA* - *7.63*** *Raipur, Chhattisgarh*

Mirza Ghalib College, Gaya **10/2020 – 04/2024**
Bachelor of Computer Applications - ***Percentage* - *71.53%*** *Gaya, Bihar*

PROJECTS

Project Polaris: AI-Based Research Discovery Platform | Django, React, Postgres **08/2026**

- **Engineered a 3-tier cold-start recommendation algorithm** that personalizes content from a user's first session using tags, activity, and sentence-transformer embeddings.
- **Automated a data pipeline covering 250M+ scholarly works** from the OpenAlex API, using Mistral AI to add summaries, difficulty tags, and topic labels.
- **Launched a 2-stage keyword-to-semantic search** that fetches and caches new research topics on demand, so the catalog is not limited to a fixed set.
- **Secured user accounts with 3 layers** (reCAPTCHA, email OTP, token invalidation on password reset) and added upvote/downvote feedback to refine recommendations.
- Live Site here

SentinelNet Shield: AI-Based Browser Extension | Django, React, SkLearn, Pandas **07/2026**

- **Fraud Detection:** Trained a scikit-learn Random Forest model on transaction parameters to score each purchase's fraud risk (0–100%).
- **Contextual AI Chatbot:** Built a chatbot with the Google Gemini API that reads page text and answers questions on 3 topics: site policies, hidden fees, and product safety.
- **Purchase Analytics:** Generated 3 checkout reports with Mistral AI: purchase summaries, contract breakdowns, and merchant credibility checks.
- **Web Verification:** Verified merchant reputation and flagged phishing links using the Tavily API, bringing 4 AI/ML services into one extension.
- Download Now!

NearEase – Hyperlocal Service Marketplace(Frontend) | React, Tailwind CSS, Vite **06/2026**

- **Designed a responsive marketplace UI** in React and Tailwind CSS with 3 role-based dashboards for Customers, Providers, and Admins.
- **Engineered a hybrid escrow payment flow** with the Razorpay SDK that automates commissions and payment status for 3 user roles.
- **Created reusable API client modules** that handle 3 tasks: JWT authentication, error handling, and image uploads.
- **Delivered 3 job-lifecycle features:** OTP job completion, cancellation rules, and an Earnings Passbook showing provider payouts and platform fees.
- Live site here

SKILLS

Programming Languages: Python, JavaScript, Java, C, C++, SQL.
Frameworks: Django, React, Tailwind CSS, Bootstrap, Vite.
Data Science & ML: Pandas, NumPy, Scikit-Learn, Sentence-Transformers.
Backend & APIs: REST APIs, JWT Authentication, Razorpay, Google Gemini API, Mistral AI API.
Web & IoT: HTML/CSS, JavaScript, ESP32, MQTT.
Software Design: Object-Oriented Design (OOD), Design Patterns.
Databases: PostgreSQL, OracleDB, MongoDB.
Tools and Version Control: Git, GitHub, Cloudinary, Vercel, VS Code.
Operating Systems: Linux, Windows.

CERTIFICATIONS

- **Completed** the GeeksforGeeks 160 Days of Code challenge course.
